

ABSTRACT

[0043] The disclosed device is directed toward a paintball gun vehicular mount. The paintball gun mobile vehicular mount comprises a adjustable length bracket having a having one end defined as the handlebar clamp end coupled proximate to the handlebars and the opposite end thereof defined as the paintball gun clamp end coupled to the paintball gun. A remote trigger control assembly having one end coupled to the paint ball gun trigger connect, a middle defined as the cable, and opposite end thereof defined as trigger control is mounted to the control area proximate to other hand operated controls on the vehicle. Elevation adjustment of paintball gun frame is increased by lengthening bracket or decreased by shortening bracket length adjustment.
